**Aflasafe**

**Aflasafe** dey protect your corn and groundnut from bad bad poison!

Aflatoxin dey kill!
Wetin be Aflasafe and why I go dey use am?

Aflasafe na di tin we dey comot aflatoxin for maize and groundnut. Dem make am so dat we and we family and community people go dey well and dey make money, through wetin dem call aflatoxin safe food. Aflasafe go give us plenty money wen we use am produce wetin food company dey look for and wetin oyinbo sef dem want.

Na sorghum wey don die dem take make am, them cover am with atoxtigenc wey be Aspergillus flavus wey come from our own country Nigeria. Dem dye am with blue wey dem dey use for food, make we no come confuse am with the sorghum wey we dey see everytime.

The people wey develop am na the International Institute of Tropical Agriculture (IITA). Dem collaborate with the United States Department of Agriculture–Agricultural Research Service, University of Bonn (Germany), and University of Ibadan wey dey for Ibadan, Nigeria.

Wetin be dis aflatoxin?

Dis na poison we dey for nature wey dem call am Aspergillus fungus wy come from Aspergillus flavus. E dey for ground, for plant wey don die or don decay. It dey spoil our crops until dem don mature. You no fit see am, e no dey smell and e no get taste, but the tin dey wound people and animal. E no go at all at all for dem. As we say na nature dey produce this bad one, nature sef dey produce the good ones wey be say if you use am well e go comot dis bad bad ones wey dey spoil our crops.

Aflasafe e dey easy to use. You fit look the instruction wey dey the body of the packet.

Instructions

1. Use am as dem talk.
2. Make you follow the tin wey dem recommend for your area on how dem dey grow crop.
